“Chronic Drinking and Smoking Cause both Separate and Interactive Brain Injury”

1. In what areas have specific cognitive dysfunctions been reported among active chronic smokers?

2. The co-morbidity of smoking and drinking are contributed to what factors?
 - a. Genetics
 - b. Pharmacological Interactions
 - c. Environment
 - d. All of the above
3. As presented in the article, chronic smoking alcoholics have increased brain abnormalities at the beginning of their treatment for alcoholism than non-smoking alcoholics.

TRUE FALSE

“Daughters of Alcoholics”

4. Reasons why research has focused on sons of alcoholics rather than daughters include:
 - a. Men have higher rates of alcohol dependence than women
 - b. FDA guidelines make it more difficult to conduct research with female subjects
 - c. Established general bias towards studying men rather than women with certain disorders
 - d. Both a and c
5. Severe physical punishment by a parent was a predictor of alcohol dependence later in life for both men and women equally.

TRUE FALSE

“Three Neuronal Growth Factors May Be Key to Understanding Alcohol’s Effects”

6. What three growth factors covered in the article were found to be able to regulate the behavioral effects of alcohol?

7. Blocking the function of brain cells that produce insulin or those that respond to insulin can decrease sensitivity to alcohol's intoxicating effects.

TRUE FALSE

“Addressing Alcohol Problems Within the Regular Health Care Setting, and Outside of Specialized Treatment”

8. The article contends that health-care providers have the best opportunity to screen for and address problem drinking. What are some of the reasons supporting this view?

9. “Telehealth” sessions are a successful tool in screening and treating patients in rural areas.

TRUE FALSE
10. Why are screenings and brief interventions for heavy drinkers in primary-care setting becoming more prevalent?
 - a. More doctors are dealing with alcohol issues themselves
 - b. Drinking is coming to be seen more as a health issue
 - c. People more willing to talk to their doctor about their drinking
 - d. Both b and c
