### “A Family History of Alcoholism is linked to Greater Sweet Preferences among Women”

1. Women who smoke are known to have an increase of cervical cancer, pregnancy complications and early menopause. What are some of the reasons why women continue to smoke despite these risks?
  - a. Use as a diet tool
  - b. Way to reduce feelings of depression and stress
  - c. Craving for the pleasure from taste and smell
  - d. All of the above
2. Results of this study show women who smoke required higher concentrations of sweet, and that this sensitivity is affected by the number of years a woman has smoked.

TRUE                  FALSE

3. How can the knowledge gained from this study be used to improve treatment options for clients as well as treatment outcomes?

---

---

---

---

---

### “African American and Hispanic Alcohol Abusers Need More Residential Alcohol Treatment”

4. Results of this study show that minorities are less likely to stay in treatment than whites, other factors being equal.
5. What are some of the racial/ethnic disparities that have an impact on minorities' successful completion of treatment?

TRUE                  FALSE

---

---

---

---

---

### “GABRA2 Genotype may Moderate Alcohol-Psychotherapy Outcomes”

6. What is the GABRA2 genotype and what impact is it believed to have on an individual's drinking habits?
7. Another outcome of the research was an observed differential response to psychotherapy based on the GABRA2 genotype, i.e., the low-risk genotype shows greater improvement from twelve-step facilitation (TSF) than other types of psychotherapies.

TRUE                  FALSE

### “Impulsive Behavior may Especially Vex Alcoholics with Antisocial & Borderline Personality”

8. Studies show that the two most common cluster B personality disorders found in alcoholic samples are borderline personality and anti-social personality disorders.
9. What is the implication for treatment of the finding that alcoholics without cluster B personality disorders display a greater inability to delay gratification than other healthy control subjects?

TRUE                  FALSE

---

---

---

---

---

10. The findings of this study show that treatment programs that utilize techniques that focus on “behavioral control” may work better with clients with....
  - a. Anti-social personality disorder
  - b. Borderline personality disorders
  - c. Depression
  - d. All of the above
